

A skateboarder with curly hair, wearing a white long-sleeved shirt and dark jeans, is captured in mid-air while performing a trick on a metal rail. The rail is engulfed in bright orange and yellow flames, with smoke rising from the fire. The rail is positioned over a set of red-painted concrete steps. The background shows a dense line of green trees under a bright, slightly overcast sky. The skateboarder's body is angled towards the right, with his arms outstretched for balance. The skateboard is visible, showing its underside and wheels as it makes contact with the flaming rail.

# Quadra HS Head

*Press release*

## Elinchrom announces a new Quadra flash head for the ELB 400 and Quadra series, dedicated to Hi-Sync photography.

The **Quadra HS Head** is a powerful, full-functioning miniaturized flash head which is compatible with the ELB 400 and all previous generations of Quadra packs.

Built to be as portable as possible and weighing only 0.28 kg (0.62 lbs.), this head not only packs well but it is mountable in situations that would be impossible for a full-sized flash head.

The HS designation denotes the system's optimized head for Hi-Sync photography such as high shutter speeds or overpowering the sun and limits to a minimum the gradient effect. It is ideal to use in conjunction with the new **EL-Skyport transmitter Plus HS**.

The **Quadra HS head** also integrates a daylight balanced LED modelling lamp that produces the equivalent of 50W of tungsten light output.

There exist many portable accessories dedicated to the Quadra mount but Elinchrom also offers the **Quadra reflector adapter** for those who want full access to the complete range of Elinchrom accessories, including **Rotalux**, **LiteMotiv**, etc.

The head includes an interchangeable 2.5 m head cable, the Quadra reflector 13.5 cm with multifunction cap and a Quadra protective cap.

The new flash head can be purchased either as a single item or in a set with the widely acclaimed ELB 400.
